

COYOTE SYSTEM – Notice according to REACH article 33

The Registration, Evaluation, Authorisation and Restriction of Chemicals Regulation EC 1907/2006, commonly referred to as REACH, is a European regulation on chemicals and their safe use. With the publication of candidate lists for authorisation, the European Chemicals Agency identifies sets of substances of very high concern (SVHC) that manufacturers must disclose to customers if used in their products above 0.1% by weight.

Based on the current version of the candidate list for authorisation, Coyote products contain the following SVHC above the disclosure threshold:

Product	SVHC
Coyote Nav +	Boric Acid (10043-35-3,11113-50-1) Disodium tetraborate, anhydrous (1303-96-4,1330-43-4,12179-04-3) Tetraboron disodium heptaoxide (12267-73-1) hydrate, Diboron trioxide (1303-86-2)

Coyote products are delivered with a user manual, which contains safety information addressed to the products owners and users. The SVHC used in these products do not pose a safety risk to customers under the intended use described in the user manual. Repair and maintenance work should only be carried out by Coyote authorised specialists in accordance with the technical instructions.
